Technical manual Dual PT1000 Module

ELSYS.se

Published: 16 January 2024

The Dual PT1000 module is a module that fits inside the ELT-2 and is intended for connecting one or two PT1000 platinum sensors.

Features

- Easy use with PT-1000 (RTD platinum sensor)
- 2-wire connection
- Measures -200 to 400 °C
- Fits inside the ELT-2 box
- Powered by the ELT-2 internal battery
- Very low energy consumtion
- Terminal block for easy connection

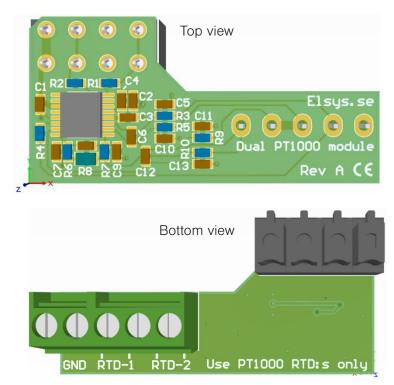

Accuracy

 \pm 0.1 °C (-40 to 200°C) + sensor deviation.

± 0.5 °C (full span) + sensor deviation.

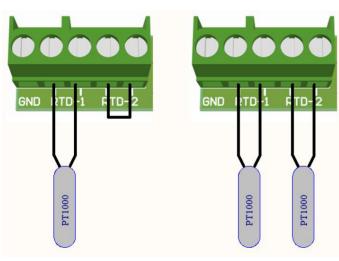

Using the module

- Set external sensor in the FLT2 to "Dual PT1000".
- Read temperature value from RTD1 in degrees Celsius with data type "External temperature" (0x0C)
- Read temperature value from RTD2 in degrees Celsius with data type "External temperature 2" (0x19)

Connection of one PT1000

Connection of two PT1000
